

# Practice Management

---

## Overview

The future of medical practices mandates leveraging skilled people with cutting-edge technology to achieve success in an ever complicated environment. Nath Billing's innovative approach to revenue cycle management pairs client service with the powerful technology of CareTracker to free physicians from administrative burdens and improves the financial success of their practices.

---

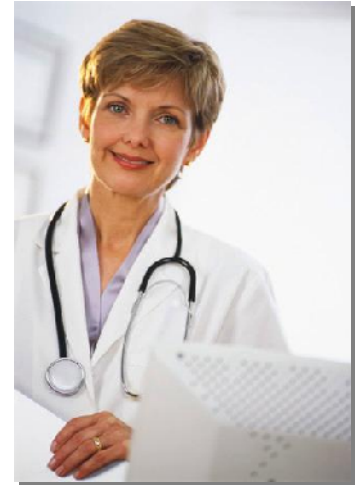

## Benefits

### Get paid more, faster

With CareTracker PM, your practice can automate time-consuming administrative tasks, such as scheduling appointments, issuing reminders, checking eligibility, documenting patient visits, and submitting claims. In addition, decision support helps clients verify and validate the accuracy of information, maximizing cash flow.

### Dedicated service team

Our systems implementation team trains your staff and provides support while our accounts receivable team manages the entire revenue cycle to ensure all visits are billed, reviews claims prior to submission, posts payments, follows-up on denied and un-paid claims, and handles patient billing and inquiries.

### Full visibility

With a powerful dashboard and comprehensive reporting, you will have immediate access to information from financials to staff productivity.

### No hidden costs

Application access is paid for via a predictable monthly subscription, which means you don't have to invest resources in IT, hardware, or maintenance costs common to client-server setups. In addition, CareTracker PM is maintained and co-located at redundant HIPAA-compliant data centers.

---

## Key Features

- Seamlessly integrates the front, middle, and back office onto a single system to eliminate redundancies and costly paper based activities
- Easy access from any web-connected device
- Verifies patient eligibility automatically
- Global data tables for referring providers, CPT, ICD, insurance companies
- Electronic super bill for point and click electronic charge capture
- Intelligent claims scrubber catches errors prior to submission reducing the time to get paid
- Routes issues to proper staff and puts them on a 'to-do' list, ensuring accountability at all levels
- Claims return to payers daily to check claim status

# Electronic Medical Record (EMR)

## Overview

Electronic medical records (EMR) can be disruptive and costly to implement. Deploying the right EMR, however, has the potential to streamline processes, secure documentation, reduce costs, and improve patient care. Ingenix CareTracker's EMR is a fully integrated, web-based solution that offers flexible options for deployment. Combined with Nath Billing's training and support, Ingenix CareTracker's EMR can be deployed with lower risk and cost.

## Benefits

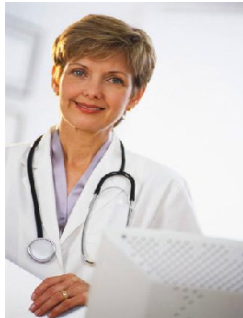

Eliminate paper charts, streamline workflow, and improve effectiveness

Quick access to patient records scanned in the patient electronic chart, allow providers to be more efficient and effective at the point of care. Seamless interfaces to labs and pharmacies streamline these time consuming manual processes for faster turn-around and improved routing and review of results.

## Decision support tools lead to better patient care

Decision support tools such as highlighting abnormal lab results and warning of drug interactions help physicians achieve measurable results. CareTracker EMR's decision support goes beyond the experience with a specific patient. Practice-wide protocols monitor patient populations within a practice. For instance, automated lists are generated to remind patients and providers where follow-up care may be appropriate.

## Great time to invest in CareTracker

With the passing of the HITECH Act, physicians that show meaningful use of a certified EMR starting in 2009 can take advantage of the maximum incentive payments from the government of between \$5,000 and \$10,000. Though all the requirements of a qualifying EMR and meaningful use have yet to be clearly defined, CareTracker EMR already meets widely accepted standards for certification, interoperability, and clinical reporting that are required by the Act. And Nath Billing will stay on top of these developments to help their clients capture the maximum dollars that will be available.

## Key Features

- Easy secure access from any web-connected device
- Monitors, measures, and escalates all clinical messages
- Gives care givers the option to use as much structure and decision support as they desire, with options for voice, point and click, and text
- Provides chart summaries, flow sheets, registry flags, and clinical notes with the click of a mouse
- Customizable, specialty specific templates
- Allows physicians to transition to an EMR without working more hours or sacrificing revenue
